NeoWave introduces Weneo Pass

Neowave just announces Weneo Pass, a new concept of mass transit oriented smart objects combining new features:

- Self-personalization: by introducing a personal ID-Photo in the lockable Weneo slot and by validating his subscription over Internet, the user transforms the standard Weneo Pass into his own personal smart object,
- Visual control: the visible and securely locked ID photo allows the controller to confirm the Weneo Pass holder is the real smart objects' owner,
- Mass transit contactless access "card" compliant with the existing infrastructures,
- Web and PC connectivity creating a unique dematerialization tool to reload tickets, update rights and personal data through the operator website,
- Personal productivity tool thanks to the secure flash memory of the Weneo,
- Auto-installation and auto-run to facilitate Weneo's use.

Weneo Pass is the evolution of the Weneo contactless Smart eMedia, introduced last autumn (*cf.* Smart Insights #07-46), featuring USB and contactless connectivity.
